1.) Background information. *Briefly describe the problem. (Max 150 words)*

2.) Objective / Aims. *Describe the research question(s) and/or aims of the study. (Max 50 words)*

3.) Study design. *Outline the study design, for example, observational or case-control*

4.) Research Population. *Define the (sub)population to be analysed and specifically the in-/exclusion criteria, for example, diabetic defined as..., subjects >75 years, etc. Also if case-control describe how these will be selected (Max 100 words)*

5.) Analysis plan. *Based on the list of available measures, indicate as accurately as possible which data are needed for the proposed research (exposures, covariates, endpoints/outcomes) and how these will be used (statistical approach, adjustments, stratification). Indicate also the time of measurement, which can be a specific period (baseline) of multiple consecutive measurements. (Max 250 words)*

5.2) Proposed work flow & data management – how will the analyses be performed and what will each centre be asked to do; will prepared scripts be used? Has a second analysis centre been identified? (Max 100 words)

6.) Time-line. *Identify the approximate timing of the various project stages*

Stage	Date
Identify studies willing to participate	
Data preparation	
Data analyses	
Drafting of report	
Presenting of report to Partners	

7.) Publication policy *Indicate for as far as possible, what scientific output this research will generate, such as publications in scientific journals and presentations at conferences and how it will be agreed upon by the Partners. If possible, indicate of the project group and others involved their role in this project and whether they will act as an (co-)author and/or first or last author.*

The undersigned declares only to use the requested data for the purpose described in this research proposal.
